

# How do Hannibal RTTs differ from the rest?

We go the extra mile regarding customisation. We're open to modifying our base products to suit the needs of our customers. We make our tents here in Australia using almost all Australian materials and are one of the only companies in our field to be registered and compliant with the Australian Made campaign logo.

- Australian Made using Australian heavy-duty Dynaproofed canvas from Wax Converters Textiles, not a polycotton material with seam-sealing tape prone to rapid deterioration. We have no need to use seam-sealing tape because of our traditional design where seasoning creates superior sealing qualities.
- 75mm Dunlop (Australian) foam for the mattress and many other materials from local Australian suppliers.
- The Hannibal specifications above are verifiable. We have always been very clear about the true spec of the product. Some other brands aren't.
- Because we make here we can customise the tent build to ensure a quality fitment for vehicle or trailer.
- Lower packed profile on vehicle rooftop (flat) with no ladder protruding on top. The ladder is tucked neatly between the baseboards.
- Internal frames are gusseted for added strength.
- Our unique reverse doorway on the non-ladder side ensures adequate cross ventilation & superior privacy.
- Anti-pooling pole for flysheet.
- Strong 2-piece ladder with wide tread profile.
- 3mm hinge bracket.
- Massive five year warranty
