

RECOMMENDATIONS FOR USE AND MAINTENANCE

To ensure long life from your Hannibal tent or awning we recommend the following maintenance and care.

- **New canvas should be thoroughly wet before use and allowed to dry. Repeat 2 to 3 times to ensure sealing up of the seams. The wetting process will season the canvas and allow the canvas to shrink and stitching to swell. It will also give you a good opportunity to ensure that the tent will provide a dry location in the event of wet conditions.**
- **If water ingress is experienced from the seams use Bees wax stick. Run the stick over the seam area several times when tent is dry.**
- **Clean canvas with cold water and brush – do not use soap or detergent.**
- **Clean the PVC cover with a vinyl rejuvenator like Armor All Protectant. This type of product will rejuvenate the vinyl and enhance the UV protection.**
- **Ensure product is completely dry prior to storage.**
- **Do not store directly on concrete floors.**
- **Do not expose to petrol, oil or solvents.**
- **Aged canvas should be rejuvenate with Dynaproof Reproofing Formulation. This product is available in water based and solvent based solution.**
- **If the tent or awning has not been used for long periods of time it would be advised that the items should be opened out to air every few months.**

Please note, it would be advised that you use your discretion based on your location. For example: if you live in the tropics and have experienced high rain fall the moisture content will be higher and could be an issue for a tent left in the corner of the garage or on top of a vehicle.

The points listed above is to be used as a guide only. If you require clarification on any point please contact Hannibal Safari Equipment.
